REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

For claim 1, French Patent Document FR 2 731 496 A1 (FR '496) discloses a device used in combination with at least two lengths of trunking to join the at least two lengths of trunking by bearing against a support surface. The device includes a plate. Backs of the trunking base section have substantially plane rear faces bearing against the support surface and opposite top faces. The plate has a rear surface are flush with the rear faces of the backs. The plate has on each of its edges adjacent transverse edges of the trunking base sections rear and top longitudinal tongues respectively bearing on the rear face at the opposite top face of the corresponding back. The rear tongues are substantially flat and are accommodated rearwardly beyond the substantially plane rear face to bear elastically against the opposite faces of each panel. FR '496 fails to disclose that the rear tongues have a thickness from about 0.2 mm to about 1mm. The rest of the prior art of record fails to disclose a device having a rear and top longitudinal tongues for joining two surfaces where the rear tongues have a thickness from about 0.2 mm to about 1mm. Accordingly, it would not have been obvious to one having ordinary skill in the art at the time of applicant's invention to have the rear tongues provided with a thickness from about 0.2 mm to about 1mm where this thickness will avoid the need of special adaptations of the back of the trunking device and of the longitudinal tongues as cited by the applicant's specifications in lines 27-35 of page 3 and line 1 of page 4.

Regarding claim 5, FR '496 discloses a device for connecting two lengths of extrusions. However, FR '496 fails to disclose that the plate is plane with at least two transverse ends. Accordingly, it would not have been obvious to one having ordinary skill in the art at the time the invention was made to have a plane plate with at least two transverse ends.

For claim 8, FR ' 496 fails to disclose that the plate carries in a top face pillar with an orifice. Likewise, it would not have been obvious to one having ordinary skill it the art the time of applicant's invention to have an orifice located in a top face pillar of the plate that facilitates fixing the plate to a support.

Regarding claim 11, FR '496 discloses a device for connecting two lengths of extrusions. However, FR '496 fails to disclose that the two parts of the plates are fixed to each other. Therefore, it would not have been obvious to one having ordinary skill in the art at the time of applicant's invention to have the two parts of the plate being fixed to each other.

For claim 14, FR '496 discloses a device for connecting two lengths of extrusions. However, FR '496 fails to disclose that the plate has at least one flat bottom and top tongues extending beyond one of the edges in a plane parallel to the plate where the tongues are spaced apart from each other by a space equal to the thickness of the plate. Likewise, it would not have been obvious to one having ordinary skill in the art at the time of applicant's invention to have at least one flat bottom tongue and at least one flat top tongue extending beyond one of the edges in a plane parallel to the

Art Unit: 3677

plate where the bottom tongue and the top tongue are spaced apart from each other by a space equal to the thickness of the plate.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Sutter (US 3,352,071), Wendt (US 3,989,398), Macuga et al. (US 4,114,326), Chou (US 5,671,580), Quillin (US 5,966,893), Desrochers (US 6,408,922 B2) and French Patent Document FR 2 731 496 A1 are cited to show state of the art with respect to connectors having at least one edge provided with tongues arranged in a winners' podium configuration.
